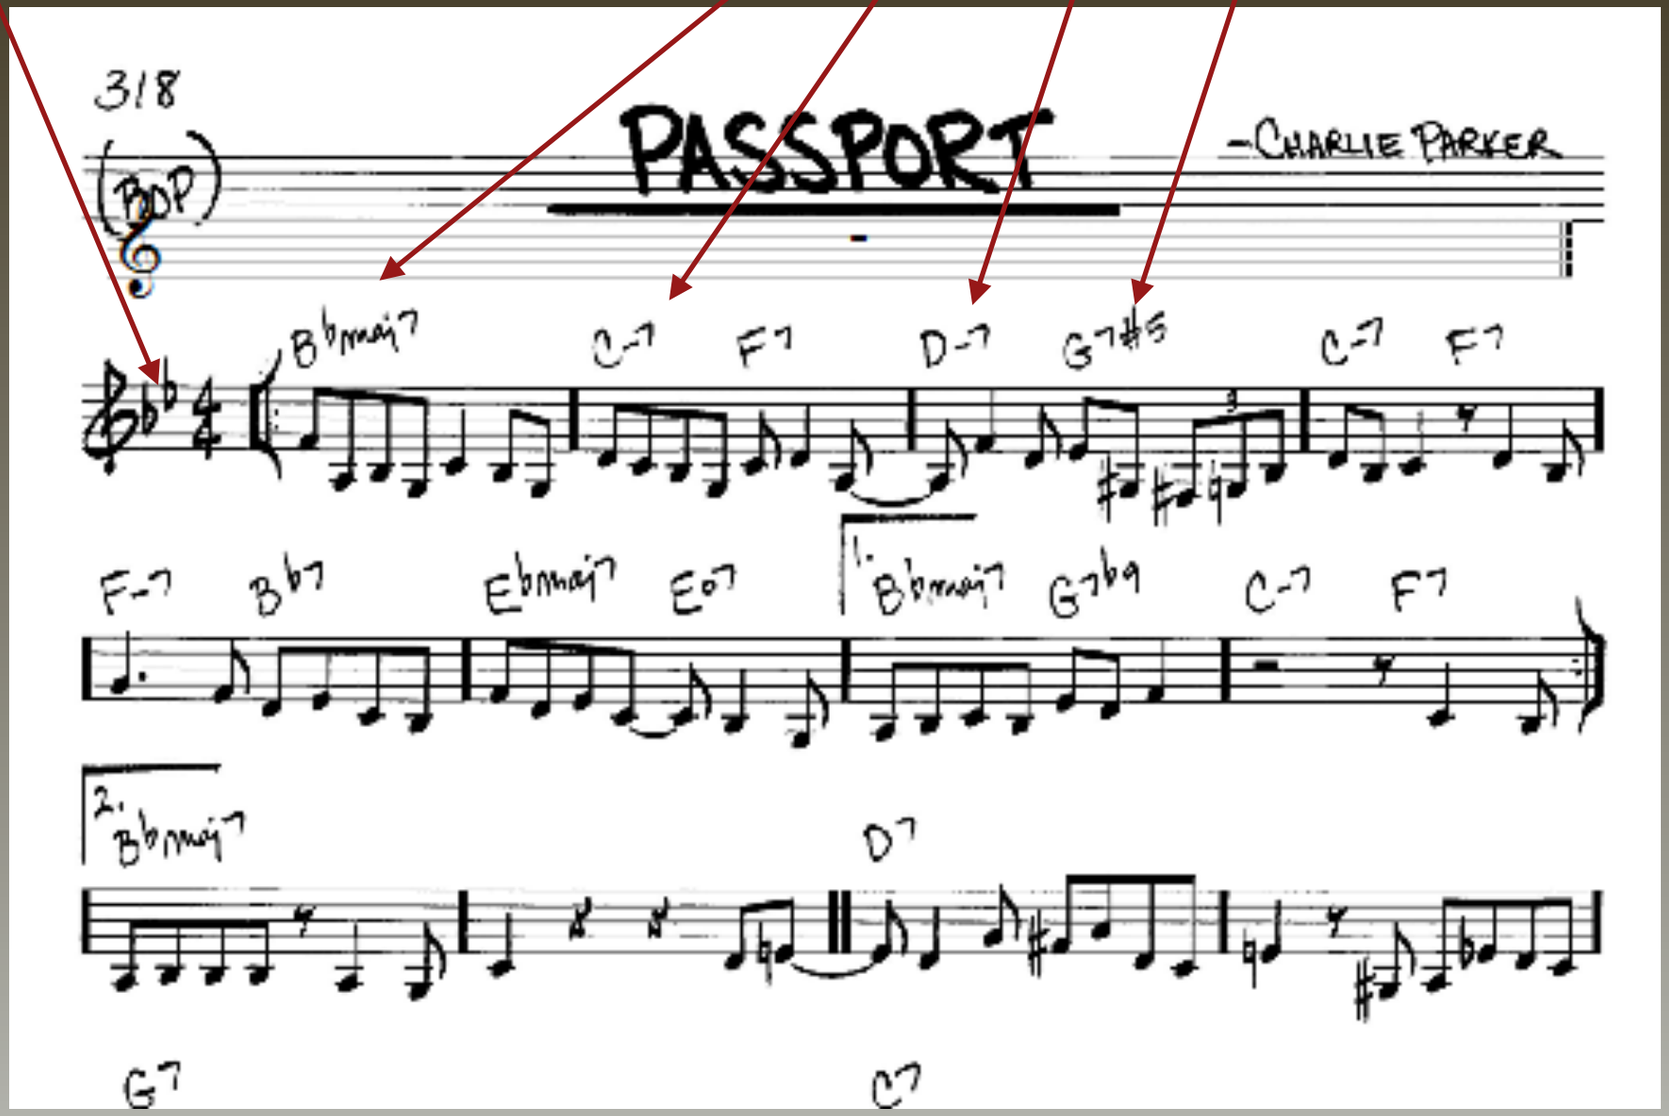
Instructions

Guidelines



Perform as suggested

# General Request

# Open to interpretation*

* If you know what you are doing

# Classical: Final Class

# Jazz: Extensible class

# Jazz: S.O.L.I.D

# Not Ashford and Simpson*

* Solid (as a rock)

S : Single Responsibility
O : Open/Closed
L : Liskov Substitution
I : Interface Segregation
D : Dependency Inversion

$$\mathbf{A}^{-1} = \frac{1}{\det(\mathbf{A})} \sum_{s=0}^{n-1} \mathbf{A}^s \sum_{k_1,k_2,\ldots,k_{n-1}} \prod_{l=1}^{n-1} \frac{(-1)^{k_l+1}}{l^{k_l}\, k_l!} \operatorname{tr}(\mathbf{A}^l)^{k_l}$$

# Big O Notation Summary

| Notation | Type | Examples | Description |
|---|---|---|---|
| O(1) | Constant | Hash table access | Remains constant regardless of the size of the data set |
| O(log n) | Logarithmic | Binary search of a sorted table | Increases by a constant. If n doubles, the time to perform increases by a constant, smaller than n amount |
| O(< n) | Sublinear | Search using parallel processing | Performs at less than linear and more than logarithmic levels |
| O(n) | Linear | Finding an item in an unsorted list | Increases in proportion to n. If n doubles, the time to perform doubles |
| O(n log(n)) | n log(n) | Quicksort, Merge Sort | Increases at a multiple of a constant |
| $O(n^2)$ | Quadratic | Bubble sort | Increases in proportion to the product of n*n |
| $O(c^n)$ | Exponential | Travelling salesman problem solved using dynamic programming | Increases based on the exponent n of a constant c |
| O(n!) | Factorial | Travelling salesman problem solved using brute force | Increases in proportion to the product of all numbers included (e.g., 1*2*3*4…) |
